Microsoft Azure

Web Development

Cloud Architecture

Results-driven **Full Stack Java Developer** with over **8.6 years of experience** in designing, developing, and deploying scalable **web and enterprise applications** using **Java/J2EE technologies**. Demonstrated expertise across the **entire software development lifecycle (SDLC)** — from requirements gathering and design to implementation, testing, and maintenance — within **Agile environments**.
Specialized in building **microservices architectures** using **Spring Boot** and **GraphQL**, with hands-on experience integrating **RESTful APIs** and **Kafka** message brokers for real-time data processing. Skilled in leveraging **Microsoft Azure cloud services** to deliver robust, secure, and scalable solutions; **certified in Microsoft Azure Cloud Fundamentals (AZ-900)**.
Hands-on experience in **front-end development** using **React JS, JavaScript, HTML5, and CSS3**, ensuring seamless and responsive user experiences. Renowned for **strong problem-solving, debugging, and communication skills**, fostering effective collaboration with cross-functional teams to drive **high-quality software delivery** and continuous improvement.

Career Path

2023-10 - Current

Senior Technology Associate

Publicis Sapient, Pune, India

- As a **Senior Associate in Technology**, I am responsible for the **end-to-end design, development, deployment, and maintenance** of **scalable, cloud-based microservices** within the **healthcare domain**.
- My role involves designing and delivering **high-performance, secure, and compliant solutions** using **Java, Spring Boot, GraphQL**, and **Microsoft Azure**.

2021-02 - 2023-09

Senior Project Engineer

WIPRO Limited, Pune, Maharashtra

- Led cross-functional teams to deliver complex engineering projects on time, ensuring compliance with industry standards and client specifications.
- Spearheaded the adoption of Agile practices, resulting in improved project visibility and faster response times to changing client needs.
- Mentored junior engineers, fostering skill development and enhancing team performance through knowledge sharing and best practices.

2020-01 - 2021-01

Senior Software Engineer

Microservices Development

DevOps Implementation

Version Control

Agile Methodologies

Personal Details

Date of Birth: 03 June 1991

Nationality: Indian

Marital Status: Married

Passport: Y7945901

Personal Details

ENGLISH, HINDI, ODIA, MARATHI, GERMAN

English

Bilingual or Proficient (C2)

Hindi

Bilingual or Proficient (C2)

Marathi

Intermediate (B1)

German

Beginner (A1)

VFISLK Global Services, Bengaluru, Karnataka

- Developed and optimized backend services using Java and Spring Framework, significantly improving application responsiveness and reliability.
- Coordinated with QA teams to establish testing protocols, ensuring software releases met quality standards and compliance requirements.
- Corrected, modified and upgraded software to improve performance.

2017-03 - 2020-01

Software Engineer

Yash Technologies Pvt Ltd, Pune, Maharashtra

- Developed and maintained scalable applications using Java and Spring Framework, enhancing system performance and reliability.
- Collaborated with cross-functional teams to implement Agile methodologies, resulting in improved project delivery timelines and team efficiency.
- Designed and executed unit tests and integration tests, ensuring code quality and reducing the number of critical bugs in production.

Education

2017-01

Post Graduate Diploma: Advanced Computing

Sunbeam Institue of Information Technology - Karad, India

- Completed 24 weeks full time Post Graduate Diploma course in Advanced Computing
- GPA: A Grade

2014-05

Bachelor of Technology: Computer Science and Engineering(CSE)

Biju Patnaik University of Technology - Bhubaneswar

Certification

SCRUM Fundamentals certified – SCRUMStudy

2024-10 Microsoft Certified - Azure Fundamentals

Projects

Project: HEMI – Pharmacy Order Management System (OptumRx)
Role: Software Developer
Description: HEMI is a high-performance pharmacy order management platform for OptumRx that enables members to create, modify, cancel, and track prescription orders through a dedicated portal. The system streamlines data flow between multiple backend services and databases to ensure seamless order processing and real-time updates.

Tech Stack: Java 21 | Spring Boot 3 | GraphQL | Kafka | Azure Cosmos DB | REST APIs | Jenkins | GitHub | JUnit 5 | Mockito | JMeter | Azure App Insights | Microservices Architecture | CI/CD | Dynatrace

Key Responsibilities & Achievements:

- Developed and maintained **end-to-end microservices** using **Java 21, Spring Boot, GraphQL** and **Kafka**, enabling scalable and event-driven data flow between systems.
- Designed and implemented APIs to handle order lifecycle events (creation, modification, cancellation) and integrated with **Persistent Layers (PLs)** for data consistency.
- Integrated **Azure Cosmos DB** as a high-performance data layer, improving data fetch speeds by bypassing direct queries to the **Iris SQL (InterSystems)** database.
- Designed and developed complex business logic using **Java Stream APIs** and **advanced Java features** to optimize performance and code readability.
- Applied **object-oriented design principles** and **design patterns** (such as Singleton, Factory, Builder, and Strategy) to ensure scalable and maintainable code across microservices.
- Implemented and maintained **microservices architecture** using **Spring Boot**, promoting modularity and independent service deployment.

- Collaborated with **QE teams** to refine user stories, create test scenarios, and validate feature functionality through **JUnit 5** and **Mockito**-based unit and integration testing.
- Partnered with **DevOps** teams during production deployments and resolved live production issues.
- Conducted **performance testing using JMeter**, ensuring microservice scalability, stability, and optimized throughput.
- Contributed to cross-team communication between services handling members, prescriptions, providers, and claims through **REST and GraphQL APIs**.
- Utilized **Dynatrace** and **Azure Application Insights** for monitoring application performance, identifying bottlenecks, and resolving production issues.

Project: VBRS – Value Based Reimbursement Service (Optum / UHG)
Role: Full Stack Developer
Description: VBRS (Value Based Reimbursement Service) is a healthcare application under Optum (UHG) that automates and manages the **end-to-end capitation and reimbursement process** between insurers and healthcare providers. The system ingests and processes contracts, member data, and various business factors to accurately calculate capitation payments while ensuring compliance and efficiency in healthcare reimbursements.

Tech Stack: Java 8 | Spring Boot | RESTful Web Services | Kafka | MySQL | JUnit | Mockito | Gradle | Jenkins | Linux | Agile Methodology

Key Responsibilities & Achievements:
- Designed and developed **RESTful APIs** using **Java 8** and **Spring Boot**, enabling full CRUD functionality for contracts, members, and payment data.
- Implemented complex business logic through reusable **Java components** and effectively used **Collections (List, Set, Optional)** for data handling and processing.
- Built and maintained **Kafka producers and consumers** for real-time data streaming and asynchronous processing between distributed components.
- Applied **Test-Driven Development (TDD)** practices using **JUnit** and **Mockito**, ensuring robust test

coverage and high code quality.
- Managed build and deployment using **Maven**, **Gradle**, and **Jenkins**, and participated in **code reviews** to maintain coding standards.
- Collaborated closely with end users and business teams for **requirement analysis**, problem-solving, and validation of system functionalities.
- Worked in an **Agile environment**, contributing to sprint planning, daily scrums, and delivering incremental feature enhancements.
- Acted as a **full-stack contributor**, handling backend logic, integration, and configuration, and received multiple client appreciations for timely and quality deliveries.

Project: VOYA Financial – Retirement & Investment Management Platform
Client: Voya Financial Inc. (USA)
Role: Full Stack Developer
Description: Voya Financial is a leading American financial services company offering retirement, investment, and insurance solutions, including 401(k) and IRA plans. The project focused on building and maintaining scalable, cloud-based microservices to support Voya's digital retirement and investment management platforms.

Tech Stack: Java | Spring Boot | Maven | Pivotal Cloud Foundry (PCF) | Jenkins | Eclipse | IntelliJ IDEA

Key Responsibilities & Contributions:
- Developed and maintained **RESTful APIs** using **Spring Boot** for various retirement and investment plan services.
- Designed and implemented **backend modules** to handle account management, transaction processing, and portfolio data.
- Utilized **Maven** for project build automation and dependency management.
- Deployed and managed microservices on **Pivotal Cloud Foundry (PCF)** ensuring high availability and scalability.
- Set up **continuous integration and deployment pipelines** using **Jenkins** for seamless delivery.
- Implemented **application monitoring and centralized logging** for all PCF apps to ensure system reliability and quick issue resolution.

- Optimized application performance through efficient **cache region management** and tuning.
- Collaborated with cross-functional teams in an **Agile environment** to deliver new features and enhancements on schedule.

Project: Solution Accelerator – Big Data ETL & Analytics Platform
Client: John Deere
Role: Full Stack Developer
Description: Solution Accelerator is a web-based **Big Data ETL and Analytics Platform** developed for John Deere to simplify data integration, processing, and visualization. The platform allows users to seamlessly connect to diverse data sources, perform data transformations, and gain actionable insights through rich statistical dashboards and interactive visualizations.

Tech Stack: Java, Spring Boot, Thymeleaf, JavaScript, jQuery, HTML, CSS, AWS (S3, DynamoDB, IAM, EC2), Kibana, Grafana, Google Charts

Key Responsibilities & Contributions:
- Designed and developed **end-to-end modules** using **Java** and **Spring Boot**, ensuring scalable and maintainable backend services.
- Built the **web-based user interface** using **Thymeleaf**, **JavaScript**, **jQuery**, **HTML**, and **CSS** for intuitive data interaction and visualization.
- Integrated the platform with **AWS services** such as **S3** for storage, **DynamoDB** for NoSQL data management, **IAM** for access control, and **EC2** for application hosting.
- Implemented **data visualization components** using **Kibana**, **Grafana**, and **Google Charts** to present real-time analytics and metrics.

Accomplishments

- Achieved cloud certification by completing trainings with efficiency.
- Resolved production issue through consumer testing.
- Documented and resolved production issue which led to successful results.
